02 The Project

The Project (Fullstack Python)

The Project (Fullstack Python)

INTRODUCTION

The Project (Fullstack Python)

PREREQUISITES

Content

Before attempting this project, please make sure you have:

- Completed the HTML, CSS and JavaScript courses
- Completed the Python course
- Completed the SQL course
- Completed the Flask course and;
- Attempted all quizzes and any other forms of assessments in these courses.

The Project (Fullstack Python)

REQUIREMENTS

To carry out this project, there are some things you need.

- A computer;
- A code editor or an IDE;
- Good internet connection
- Burning passion

THE PROJECT

The project you are required to build is a simple portal web application for students.
The portal application allows students to enter their

The Project (Fullstack Python)

BUILDING THE STUDENTS' PORTAL APPLICATION.

Content

BUILDING THE STUDENTS' PORTAL APPLICATION.

This is the first page of the application. It should have:

- a Top Navbar section,
- a Intro section
- a Footer section

The Project (Fullstack Python)

The Project (Fullstack Python)

Content

The Project (Fullstack Python)

Picture 1. The Landing Page

The Navbar section contains the web application logo (which also serves as a navigation link), and other navigation links. These links are used to navigate to the other pages of the application.

The Intro section's main purpose is to describe briefly what the application is all about. It does so using the main title and tagline, and an image. It also has a call-to-action button, with which a user is directed to portal form.

The footer simply contains the copyright text.

The Portal Form Page

The Project (Fullstack Python)

- a Top Navbar and Footer section (same as landing page),
- a Form section

Content

The Form section should contain a form, with which a user inputs his/her details into the application.

On a minimum, the form should have:

- text input boxes for names, address, etcetera
- an email input box
- an input box for image upload
- a date input box
- select input boxes (should be populated dynamically using asynchronous javascript.)
- a number input box
- a submit button

The Project (Fullstack Python)

On clicking on the submit button:

- all input boxes should be validated for being filled
- all the user values should be saved into the application's database, except the image
- the image itself should be saved in the project folder
- and the the image's name should be saved in the database,
- if the details get saved successfully, the user should be redirected to the next page
- else the user should be retained in the current page, and notified of the failure

The Project (Fullstack Python)

The screenshot shows a web form titled "Personal Information" with a dark blue header. Below the header, there is an "Upload Image:" section with a "Choose File" button and "No file chosen" text. The form is divided into two columns. The left column contains fields for "FirstName", "LastName", "Date Of Birth" (with a date picker), "Phone Number", "State Of Origin" (a dropdown menu), and "Next Of Kin". The right column contains fields for "MiddleName", "Email", "Male" and "Female" radio buttons, "Address", "Local Government" (a dropdown menu), and "Jamb Score". A "Submit" button is located at the bottom right of the form. Below the form, there is a purple footer bar with the text "All rights reserved @Startcode 2023".

Picture 2. The Portal's Form Page

The Portal Form Page

This is the page where the user gets redirected to on successful submission of the portal form. It fetches all students' details from the application's database, and then displays them in a table.

The visual components should include:

- the same Navbar and Footer sections, as the previous pages
- a table, that lists all the students' entries in the application's database
- the table should have columns for Serial Number, Name, and a few other details of the student

Content

The Project (Fullstack Python)

The Project (Fullstack Python)

On clicking any of the buttons, the user should be redirected to a new page.

Content

The screenshot shows the 'startcode' application's index page. It features a purple header with 'startcode' and 'Home' on the left, and 'Get Started' on the right. Below the header is a light blue box with the text 'Info! All students records table'. Underneath this is a search bar with four input fields: 'Search Record By Name Only', 'Select Admission-Status', 'Select Gender', and 'Enter Jamb Score', followed by a blue 'search' button. The main content is a table with the following data:

S/n	Name	Gender	Jamb Score	Admission Status	Action
1	AbduQuodus Ademola Adebogun	female	590	admitted	
1	AbduQuodus Ademola Adebogun	male	280	admitted	
1	AbduQuodus Ademola Adebogun	male	280	undecided	
1	AbduQuodus Ademola Adebogun	male	280	undecided	
1	AbduQuodus Ademola Adebogun	male	280	undecided	
1	AbduQuodus Ademola Adebogun	male	280	undecided	
1	AbduQuodus Ademola Adebogun	male	280	undecided	
1	AbduQuodus Ademola Adebogun	male	280	undecided	
1	Chukwadi Adamu Oluasegun	male	280	undecided	
1	John Chukwadi Amadi	male	180	undecided	

At the bottom of the page, there is a purple footer with the text 'All rights reserved @Startcode 2023'.

Picture 3. The Index Page

The Student's Details Page

This is the page where the user gets redirected to when any of the View buttons is clicked, from the Index page. The full details of a specific student is pulled from the database and displayed here.

The visual components should include:

- the same Navbar and Footer sections, as the previous pages
- a main section, between the Navbar and the Footer, where the user details are displayed.

The Project (Fullstack Python)

suggested form element to be used is a select element.
This change of status should happen asynchronously.

Content

Picture 4. The Details Page

UPON COMPLETION:

Upon the full development of this web application, all features that are expected (or required) to work include:

1. All the pages of the application must have a consistent header and footer, and their appropriate navigation links.
2. The landing page must have a call-to-action button, which redirects the user to the Form page.

The Project (Fullstack Python)

- file upload
- text
- email
- number
- select box
- radio buttons

Content

4. The select boxes must fetch options' values dynamically using Asynchronous JavaScript. The file that contains the required data can be found [HERE](#)

5. The form must also have a submit button, which when clicked, should submit the form to the server, and then redirect the user to the Students' Index page.

The Project (Fullstack Python)

6. The Index page should have a table, where important details of each student are listed.

7. The details should be fetched from the application's database.

8. Each of the rows in the table should have a button, which when clicked, should redirect the user to the Details page, where the details of the corresponding student is displayed.

9. The details of the student should be fetched from the application's database.

10. The Details page should appropriately display all the details of the selected student, which must compulsorily include the image of the student.

11. On submitting the form on the Portal's Form page, the image should be saved in the application's folder, while its

The Project (Fullstack Python)

FINAL NOTES

Content

- Please ensure you separate all different language files for the client side i.e. a different file for HTML, CSS and JavaScript.
- Try as much as possible to separate different operations into different functions, it would help you and any other person to understand your code better or even make it easy to debug (i.e find errors) when such situations arise.
- The importance of code comments can never be overemphasized. Please make use of brief, yet descriptive comments in appropriate parts of your code or markup.
- You are also encouraged to search across the internet on your own for solutions when you get stuck before probably escalating it to your mentor.
- However, lifting code verbatim online or not having a good understanding of it before use is highly discouraged. If you find out that you do not understand the solution you found, revert to your mentor for better insight.
